VIREO SUPPORT INTELLIGENCE

Executive CX Brief · 18-Month Operational Audit & Repeat Economics

To: Priya Raman (Head of CX) | Date: 29 Sep 2026 | Coverage: 1 Jan 2025 · 30 Jun 2026 | Canonical Tickets: 11,875

1. Business Goal

Reduce the 30-day repeat-contact rate from the observed 14.38% toward a 5.00% planning target. Across 10,463 eligible tickets with a complete 30-day post-resolution observation window, 1,505 tickets generated repeat contacts (yielding 1,573 incoming contacts costing Rs 4,09,470). Reaching the 5.00% target (523 tickets) establishes a 982-ticket reduction scenario, representing an estimated modelled planning opportunity of approximately Rs 2.85 lakh (Rs 2,84,780 at blended Rs 290 standard; Rs 2,56,489 channel-mix). Modelled figures are for resource allocation, not realized savings.

2. Key Operational Findings (11,875 Canonical Tickets)

- Financial Baseline: Total direct contact spend was Rs 32,48,430 (avg Rs 273.55/ticket). Helpdesk transfers added Rs 2,64,740 across 1,040 hand-offs.
- SLA Exposure: 1,051 first-response SLA breaches (8.85% of canonical tickets), generating Rs 3,67,850 in SLA-credit exposure. Mean CSAT: 3.3152 (5,269 valid responses, 44.37% rate).
- Resolver Alignment: 1,448 tickets (12.19%) had a resolver team different from the initial assigned team, contributing to subsequent transfers.
- Issue Distribution: PRODUCT: 2,893 tkts (24.36%, 16.90% rep). Earbud Bluetooth/pairing issues are a recurring product complaint pattern. OTHER: 2,572 (21.66%) | DELIVERY: 2,138 (18.00%, lowest CSAT 3.03) | BILLING: 1,627 (13.70%) | RETURNS: 1,204 (10.14%) | APP: 824 (6.94%) | WARRANTY: 617 (5.20%).
- Frontline vs Tier-2: Tier-1 closed 10,547 tickets (~277/agent; 9,507 resolved + 1,040 auto-closed). Tier-2 handled 719 complex cases with 2.68-day median turnaround.

3. Repeat Contact Economics & Planning Opportunity

Policy Section 6: Repeat contact = same customer & issue within 30 days of resolution. June 2026 (803 tkts) is right-censored; 609 open tickets are excluded. Evaluated coh

Metric Category	Observed Historical Baseline	5.00% Planning Target Scenario
Repeat-Eligible Evaluated Cohort	10,463 tickets (resolved <= 31-May-2026)	10,463 evaluated tickets
Repeat-Generating Tickets	1,505 tickets (14.38% of repeat-eligible tickets)	523 target tickets (5.00% target)
Incoming Repeat Contacts	1,573 total (1,512 from eligible cohort)	Avoidable reduction: 982 tickets
Total Repeat Contact Spend	Rs 4,09,470 total (Rs 3,93,090 eligible)	Multiplier: 1.00465 contacts/repeat ticket
Unit Cost Basis	Rs 260.31 / contact; Rs 261.19 / repeat ticket	Rs 261.19 channel-mix / Rs 290 blended
Modelled Planning Opportunity	Baseline (Observed)	Rs 2,56,488.58 (channel) | Rs 2,84,780 (blended)

PLANNING SCENARIO: The savings above are modelled planning figures, NOT realized or guaranteed savings.

4. Strategic Recommendations

1. Improve Intake Routing: Refine frontline triage keyword definitions for high-transfer issue areas to minimize resolver team differences.
2. Strengthen First-Contact Troubleshooting: Deploy guided triage workflows for recurring earbud pairing/product issues to reduce repeat rate.
3. Enhance Delivery Tracking: Provide automated courier tracking updates to resolve shipping inquiries before customers reach frontline support.
4. Monitor Cohort Repeat Metrics: Track monthly 30-day repeat-contact rates against the 5.00% planning target alongside operational SLA guardrails.

5. Technical Limitations & AI Methodology

- AI Methodology: Evaluated on 50-ticket human gold set (96.0% accuracy, 0.9749 macro-F1) with 100% evidence grounding (0 hallucinations).
- Deterministic Calculation: Repeat detection and business metrics calculated deterministically (AI interprets free text; code calculates metrics).
- Right-Censoring: 803 tickets resolved in June 2026 cannot be evaluated for 30-day repeat contacts until July 31, 2026.
